Rector's Message.....	2
Foreword.....	3
Institutional Structure.....	4
2025 Events and Activities.....	8

Sustainability is one of the most important areas of responsibility shaping our future through its environmental, economic, and social dimensions. Universities are not only institutions that produce knowledge, but also pioneering structures that guide sustainable development and contribute to social transformation.

In line with the United Nations Sustainable Development Goals (SDGs), the development objectives of our country, and the vision of sustainability in higher education, we, as Karadeniz Technical University, place sustainability at the core of our education, research, social contribution, and institutional governance processes.

Throughout 2025, our university carried out significant initiatives in many areas, including quality education, climate action, energy efficiency, scientific research, social inclusion, and regional development. Through projects focused on scientific knowledge production and societal contribution, we continued to support the achievement of sustainable development goals.

This report presents our university's activities in the field of sustainability and our commitment to the future. Guided by science and in collaboration with our stakeholders, we believe that we will continue working towards a more sustainable future.

Prof. Dr. Hamdullah ÇUVALCI  
**Rector, Karadeniz Technical University**

Karadeniz Technical University continues its education, research, and community engagement activities in line with Sustainable Development Goal 4 (SDG-4): Quality Education, which aims to promote inclusive, equitable, and quality educational opportunities for all. Our university considers strengthening access to higher education, supporting lifelong learning, and educating individuals equipped with the competencies required by the modern era among its fundamental priorities.

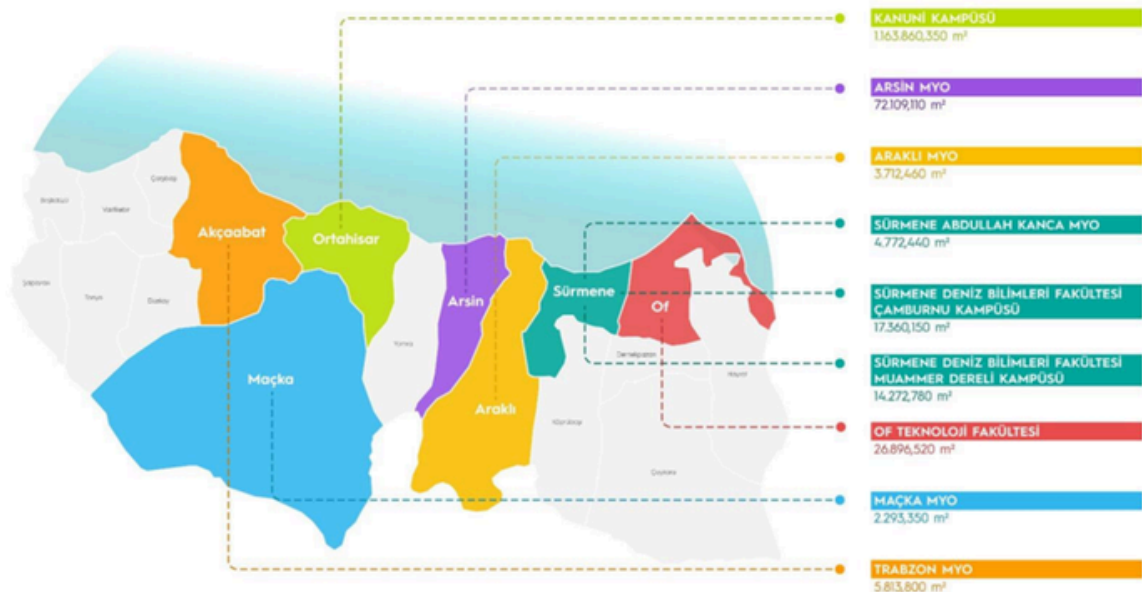

With its well-established academic background and strong educational infrastructure, KTU aims not only to provide professional knowledge but also to educate innovative individuals who possess critical thinking skills, social responsibility awareness, and the ability to compete globally. In this context, undergraduate, graduate, and lifelong learning programs at our university are supported through digital learning opportunities, open-access practices, student support services, and inclusive education policies. Importance is given to accessibility, equal opportunity, and student-centered learning approaches to ensure the equal and effective participation of students from different socioeconomic and cultural backgrounds in educational processes. In addition, our university contributes to the dissemination of quality education through scientific research, national and international collaborations, and community-oriented learning activities.

This report has been prepared to present KTU's activities carried out within the scope of SDG-4, its practices aimed at accessibility and inclusiveness in education, its strategies to improve learning quality, and its sustainable education approach.

# Institutional Structure

As one of Turkey's most established universities, Karadeniz Technical University (KTU) has an institutional educational infrastructure structured in line with the principles of quality, accessibility, and inclusiveness in higher education. Our university's educational activities are conducted through programs offered at different academic levels (associate, undergraduate, and graduate); this structure is continuously developed to support quality and sustainable learning opportunities.

# Institutional Structure

## Faculties and Colleges

KTU has 12 faculties, 80 departments, 1 college, 8 vocational schools, and 6 institutes offering 89 master's and 54 doctoral programs. These units offer associate, undergraduate, and graduate programs, providing students with up-to-date, scientific, and applied knowledge in their respective fields. Each program is structured in accordance with national and international accreditation processes, and course plans and outcomes are updated with a student-centered approach.

## Postgraduate Education and Research

Our university's graduate education structure is conducted through the Institute of Forensic Sciences, the Institute of Marine Sciences and Technology, the Institute of Science, Karadeniz Technical Research Institute, the Institute of Health Sciences, and the Institute of Social Sciences. These institutes encourage scientific research, academic development, and interdisciplinary collaborations, while master's and doctoral programs train qualified researchers.

Number of Graduate Students

3714

Number of Foreign Students

2105

Students

29537

## International Students and the Global Learning Environment

In line with its vision for internationalization in higher education, Karadeniz Technical University (KTU) hosts students from different countries, providing an inclusive and multicultural learning environment. The presence of international students at KTU serves as a significant indicator of the university's global contribution to SDG 4: Quality Education. Currently, numerous undergraduate and graduate international students from regions including Asia, Africa, the Middle East, the Balkans, and the Caucasus are enrolled at the university.

The International Student Coordination Office and the Directorate of Health, Culture, and Sports support students throughout registration, advising, orientation, and social integration processes, while also organizing various activities to strengthen multicultural interaction

## Continuing Education and Lifelong Learning with KTU SEM

Karadeniz Technical University Lifelong Learning Application and Research Center (KTU SEM) operates as an important institution that opens the university's educational opportunities to all segments of society, supporting lifelong learning. The services provided by KTU SEM contribute to the development of individuals' knowledge, skills, and competencies, while offering inclusive learning environments for people of all ages and professional backgrounds in line with SDG 4: Quality Education.

Through KTU SEM:

- Certified professional development programs, technical trainings, and personal development workshops are organized for both internal and external participants,
- Customized educational solutions are offered in collaboration with public institutions, the private sector, and non-governmental organizations,
- Online and in-person courses addressing contemporary needs are planned in areas such as digital literacy, entrepreneurship, disaster awareness, artificial intelligence, and foreign languages.

Additionally, KTU SEM provides accessible education options for women, individuals with disabilities, disadvantaged groups, and those seeking to re-enter the workforce, adopting an approach that promotes social inclusion and equal opportunities.

Through these activities, Karadeniz Technical University positions itself not only as a degree-granting institution but also as a lifelong learning center that accompanies individuals throughout their educational journeys, contributing to the Sustainable Development Goals with a holistic approach.

## **Distance Education and Digital Infrastructure**

---

In line with its digital transformation goals, KTU conducts course presentations, seminars, and assessment and evaluation activities through online learning platforms through the Distance Education Application and Research Center (UZEM). UZEM contributes to equal opportunities in education, particularly by facilitating access and providing learning processes independent of time and place.

## **Quality Assurance and Quality Education through Accreditation Processes**

Karadeniz Technical University (KTU) has successfully completed national and international accreditation processes at the faculty, department, and program levels to strengthen the academic quality assurance system, which is a fundamental pillar of quality education. These efforts directly contribute to SDG 4: Quality Education and ensure that teaching and learning activities are conducted with transparency, accountability, and a continuous improvement approach.

Through accredited units:

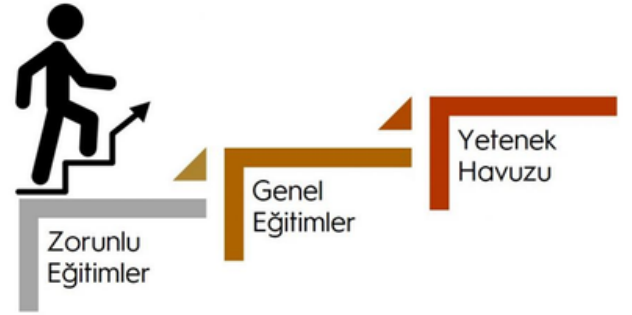

- Educational programs are structured with an outcome-based approach, enabling systematic monitoring of the knowledge, skills, and competencies intended for students,
- Continuous evaluation and improvement processes based on stakeholder participation enhance student satisfaction and enrich the learning experience,
- Graduates' recognition and employability at national and international levels are strengthened,
- Program quality standards are certified, establishing a trustworthy framework in education.

## Accreditation and Continuous Improvement in Health Education

Our university has reinforced its goal of training qualified health professionals and providing high-quality healthcare services to the community through the accreditation achievements it attained during the 2024-2025 academic year. These processes serve as a key indicator of our institutional culture of continuous improvement, aligned with SDG 3 (Good Health and Well-being) and SDG 4 (Quality Education). In this context, the Pre-Graduation Medical Education Program of the Faculty of Medicine has been accredited for the third time by TEPDAD, with validity extending through 2031. The Faculty of Dentistry received full accreditation for six years following the DEPAD evaluation; the Bachelor's Program in the Department of Nursing at the Faculty of Health Sciences was accredited by HEPDAK until 2028. Significant achievements have also been made in clinical specialty areas. The Department of Pediatric Endocrinology has been accredited by the National Association of Pediatric Endocrinology and Diabetes, becoming the seventh accredited center in Turkey. The Department of Pulmonology has been re-accredited by the Turkish Board of Pulmonology. These accreditations demonstrate that our educational infrastructure, academic staff qualifications, student support mechanisms, and the quality of healthcare services are in line with national and international standards. They also reinforce our university's identity as a reliable, recognized, and quality-focused healthcare institution.

## KTU Civil Servant Academy: Continuous Education Approach in Personnel Development

KTU continues its efforts to provide quality educational opportunities not only for students but also for its academic and administrative staff. The KTU Civil Servant Academy, established to this end, is a sustainable educational platform that supports the professional development of the university's administrative staff.

The Civil Servant Academy contributes to the continuous development of its staff by offering training in a wide range of areas, including promotions and title changes, regulatory updates, communication skills, digital competencies, and technical training aimed at improving the quality of in-house services. Training is offered in both face-to-face and online formats, supported by interactive content and expert training.

The primary objective of the training provided within the Civil Servants Academy is to train and develop existing human resources. The training aims to increase the knowledge and efficiency of administrative personnel, ensure their ability to utilize scientific and technological resources to the fullest, strengthen implementation, communication, and coordination among personnel and units, promote a quality culture within the university, and prepare personnel for higher-level positions by planning training and other processes to establish a management pool for administrative positions within the university. Three sequential training modules have been developed to address these objectives: Module 1 (Compulsory Training), Module 2 (General Training), and Module 3 (Talent Pool).

With this practice, KTU is embracing a learning institution model that prepares its staff not only for their current roles but also for future responsibilities. This structure, which integrates a lifelong learning approach into the institutional culture, significantly contributes to the dissemination of SDG-4: Quality Education to all stakeholders within the university.

## Contributing to Student Development through Career Center Activities

Karadeniz Technical University's Career Development Application and Research Center (KTU Career Center) offers comprehensive training and consulting services to help students identify their professional orientations, develop their competencies, and participate in the labor market as well-equipped individuals. These activities support not only students' academic development but also their personal and professional development, in line with SDG-4: Quality Education.

Within the Career Center:

- Workshops and seminars are organized on topics such as CV preparation, interview techniques, personal branding, effective communication, and time management,
- Career counseling and coaching services are provided for university students and graduates.

These activities by the Career Center demonstrate that our university integrates the education and training process not only around diploma attainment but also through a competency-based approach, creating a sustainable development ecosystem aimed at enabling students to achieve lifelong success.

## Library and Information Resources

Karadeniz Technical University (KTU) Central Library and its affiliated units support the learning process by providing advanced electronic resources, open-access archives, and user-friendly services that facilitate students' and researchers' access to information.

Through this infrastructure, KTU offers students in various fields not only academic knowledge but also a holistic learning experience that develops critical thinking, ethical values, social responsibility, and digital competencies. The library houses 128,628 printed books, 2,991 printed journals, 1,301,107 electronic books, 74,003 electronic journals, 1,982 CDs and DVDs, and 10,860 graduate theses. This rich collection underpins KTU's institutional educational framework and supports the university's vision of cultivating individuals equipped with the knowledge, skills, and values necessary for sustainable development in line with SDG 4: Quality Education.

## Based Learning with Research and Student Laboratories

The research and student laboratories at Karadeniz Technical University (KTU) enable students to apply theoretical knowledge in practice, develop scientific thinking skills, and enhance their academic competencies. These facilities are of critical importance for providing equal, inclusive, and high-quality technical education, which is a fundamental component of SDG 4: Quality Education.

At our university:

- A total of 478 modern research laboratories across engineering, science, health, and social science fields offer undergraduate and graduate students opportunities to develop scientific projects, conduct experimental applications, and engage in R&D activities.
- Hands-on training conducted in student laboratories helps develop professional skills and provides students with a competitive advantage in the labor market.
- These environments introduce students to scientific research processes at an early stage, enabling them to enhance critical thinking, problem-solving, and collaboration skills through a project-based learning approach.

Additionally, externally supported projects, scientific studies conducted through student groups, and laboratory-supported internship programs are among the practices that enrich the learning experience at KTU.

With its robust laboratory infrastructure, KTU creates a learning environment that supports not only quality education but also scientific productivity and innovation, making tangible contributions to SDG-4: Quality Education.

**" Hand in hand for a green and clean campus! "**

## Environmental Literacy and Zero Waste Training

Karadeniz Technical University considers equipping students with sustainable living skills and increasing environmental responsibility awareness as an important component of SDG-4: Quality Education. In this context, Zero Waste Trainings were organized for students by the KTU Zero Waste Coordination Office, reaching a total of 1,334 students.

The trainings addressed topics such as waste separation at the source, efficient use of natural resources, recycling processes, reuse practices, and sustainable consumption habits. While raising awareness among students about individual responsibilities in reducing environmental impacts, practical examples of sustainable behaviors applicable in daily life were also presented. In addition, the trainings encouraged students to adopt an environmentally conscious lifestyle, act responsibly in resource consumption, and actively participate in sustainable campus practices.

The activities carried out within the scope of the Zero Waste Training Series made significant contributions to the dissemination of environmental literacy and the strengthening of a sustainable campus culture throughout the university. Furthermore, these trainings aimed to increase students' awareness of climate change, waste management, and sustainable development while supporting long-term behavioral changes in the field of environmental sustainability. These activities are directly associated not only with SDG-4: Quality Education but also with SDG-12: Responsible Consumption and Production and SDG-13: Climate Action.

## Academic Contributions

---

Karadeniz Technical University continues its activities in the fields of education, research, and community engagement in line with SDG-4: Quality Education. Within this scope, a total of 29 scientific publications were produced in 2025, including 21 publications indexed in the Scopus database. In addition, 26 conference papers, 5 book chapters, 1 doctoral thesis, and 1 master's thesis listed in the AVESİS database are among the academic studies contributing to the field of quality education. Scientific projects conducted at undergraduate and graduate levels are actively ongoing; however, no projects were completed in 2025.

KTU adopts quality assurance, accessibility, and inclusiveness as fundamental principles in its education and training processes. With its strong academic staff, advanced research and application infrastructure, digital learning opportunities, and student-centered approach, the university provides an educational environment that meets the requirements of the modern era. Through practices supporting the academic, social, and professional development of students, lifelong learning culture is encouraged, while innovative and practice-oriented educational approaches are strengthened.

Through its research centers, laboratory infrastructure, lifelong learning activities, and interdisciplinary academic studies, KTU considers quality education as one of the fundamental pillars of sustainable development. In this regard, our university remains committed to developing a sustainable and innovative higher education model capable of responding not only to today's needs but also to the social and scientific challenges of the future.
